

Checking Alarms

On a cluster with an Enterprise Edition or Enterprise Database Edition license, MapR raises alarms to alert you to information about the cluster:

- Cluster health, including disk failures
- Volumes that are under-replicated or over quota
- Services not running

You can see any currently raised alarms in the [Alarms Views](#) view of the MapR Control System, or using the `alarm list` command. For a list of all alarms, see [Alarms Reference](#).

To view cluster alarms using the MapR Control System:

1. In the Navigation pane, expand the **Cluster** group and click the [Dashboard](#) view.
2. All alarms for the cluster and its nodes and volumes are displayed in the [Alarms](#) pane.

To view node alarms using the MapR Control System:

- In the Navigation pane, expand the **Alarms** group and click the [Node Alarms](#) view.

You can also view node alarms in the [Node Properties](#) view, the [NFS Alarm Status](#) view, and the [Alarms](#) pane of the [Dashboard](#) view.

To view volume alarms using the MapR Control System:

- In the Navigation pane, expand the **Alarms** group and click the [Volume Alarms](#) view.

You can also view volume alarms in the [Alarms](#) pane of the [Dashboard](#) view.
